Education

Arizona State University

Ph.D. in Finance

Tempe, AZ 2027 (Expected)

Dissertation Committee: Oliver Boguth(chair), Hendrik Bessembinder, George Aragon, Mazi Kazemi

Sharif University of Technology

M.S. in Economics

Tehran, Iran 2017

Persian Gulf University

B.S. in Economics

Bushehr, Iran 2014

Research Interests

Empirical Asset Pricing, Financial Institutions, Investment, Business Cycles

Working Papers

- **Household Demand Pressure and Equity Mispricing** [\[PDF\]](#)

Job Market Paper.

▷ **Abstract:** This paper studies equity mispricing associated with household demand for individual stocks. Conceptually, household demand shocks generate larger valuation distortions when less elastic institutional capital is available to absorb them. To quantify this mechanism, I construct a *Price Impact Multiplier*, which is the inverse of a stock's institutional absorption capacity and measures the model-implied price adjustment required for institutions to absorb a one-unit household demand shock. Empirically, household demand shocks scaled by the Price Impact Multiplier capture cross-sectional variation in equity mispricing over both short and long horizons. Long-short portfolios sorted on the resulting implied price impact generate abnormal return spreads of 1.36% over the subsequent quarter and 3.90% over the subsequent year.

- **Who Responds to Changes in the Market Risk Premia, and How?** [\[PDF\]](#)

▷ **Abstract:** Variation in market risk premia is reflected in the portfolio decisions of only a limited and identifiable subset of institutional investors. Using quarterly 13F holdings, I show that approximately 60% of institutions do not systematically adjust aggregate equity exposure as compensation for bearing market risk changes over time. Among those that do respond, exposure adjustments are highly heterogeneous in both sign and magnitude.

- **Net Buyback Dynamics and Risk** [\[PDF\]](#)

▷ **Abstract:** This paper studies the premium associated with firms' cash-flow cyclicalities by using payout composition as a revealed measure of the persistence of cash flows. I argue that firms distribute the permanent component of cash flows through dividends, while the transitory component is more likely to be paid out through share repurchases. The net buyback-to-dividend ratio therefore provides a proxy for firms' exposure to business cycles. I show that this ratio strongly co-moves with aggregate fluctuations and that buyback-dominated firms earn a positive premium, consistent with investors requiring compensation for holding assets with more cyclical cash flows.

- **Industry Level Signals from Institutional Portfolio Reallocations** [\[PDF\]](#)

▷ **Abstract:** This paper develops a framework to extract and quantify the information embedded in institutional investors' industry-level demand. Changes in portfolio allocations across industries are interpreted as signals

about future returns, and investors are identified as industry experts based on the historical accuracy of their allocation shifts in predicting subsequent industry performance. Aggregating these expert signals yields a novel measure, Revealed Industry Information (RII), which strongly predicts future industry returns. A long-short portfolio formed on RII earns a six-factor alpha of 1.6% per quarter after controlling for the Fama-French five factors and momentum.

- **Granular Industry Fundamentals and Equity Forecasting** [\[PDF\]](#)

Co-authored with Elham Ghorbani.

- ▷ **Abstract:** This paper examines whether real economic information from U.S. industries predicts subsequent equity returns. Using monthly measures of production, employment, hours worked, sales, and inventories across a broad panel of industries, we show that industry-level fundamentals predict both aggregate market returns and industry-level equity returns out of sample. The predictive content is strongest in upstream sectors such as manufacturing, transportation, and mining.

Teaching Experience

-
- **Security Analysis and Portfolio Management (FIN 421)** Fall 2024
Arizona State University, Undergraduate; [Instructor of Record](#)
 - **Advanced Managerial Finance (FIN 361)** Summer 2026
Arizona State University, Undergraduate; [Instructor of Record](#)
Mean Student Evaluation: 6.7/7.0
 - **Investment Strategies (FIN 525)** Summers 2022–2026
Arizona State University, MBA; [Teaching Assistant](#)
Facilitated and managed course-related discussions through Yellowdig
 - **Theory of Finance (FIN 781)** Falls 2022–2026
Arizona State University, Ph.D.; [Teaching Assistant](#)
Graded assignments on expected utility, risk aversion, stochastic dominance, mean-variance analysis, APT, and options

Awards

-
- **National Economics Olympiad**, Ranked 3rd among approximately 10,000 students 2017
 - **National M.S. Entrance Exam**, Ranked 8th among approximately 10,000 students 2017

Academic Presentations and Service

-
- **Discussant**, Financial Management Association 2025
 - **Referee**, *Journal of Empirical Asset Pricing*; *Emerging Markets Review*
